

## **Animating with key frames, frame by frame without tweens**

### **Assignment: Make your truck face one of the 9 Toyota Top Gear Tests.**

- Does your project involve more than one layer? If it does you can stack layers so that your background is the bottom layer, trees might be on another layer and your truck might be on a third layer.
- How many things move in the story? If things are stationary you have one key frame for that layer and a frame at the end. If there is motion, you need to keyframe.
- Keyframe short cut is F6.
- You might want to group the parts of your truck by turning it into a symbol (graphic or movie clip).
- Remember to have a story. For the Red Toyota there were a series of tests in the story. You should select a single test. As I recall the following tests were faced:
  - a. Hit a wall
  - b. Went down steps
  - c. Crashed into a tree
  - d. Carelessly parked in a 40' tide
  - e. Drove through a building
  - f. Dropped a trailer on it
  - g. Faced the wrecking ball
  - h. Tested by fire
  - i. Rode the building down to rest on a pile of rubble
