

**Sometimes we want to use text to reveal an image.**

To do this we opened the template for video and chose the high definition 1900 x 1080 in horizontal format.

Then we found an image of Gig Harbor and dragged it into the new composition as Layer 1

Next we typed “Gig Harbor” after clicking on the photo (not drawing a text box). We then found a wide font and stretched the text over the image.

Now drag the text layer under the Layer 1 image.

Select Layer 1, right click and choose “Clipping Plane”

You can modify the resulting image by adding other fill layers below the image.

The result is the text is revealed.
