

Mona Lisa

Concept: control visibility by controlling a symbol's alpha. 100% alpha means totally opaque. 0% means totally invisible. If you place two symbols on top of each other and tween between keyframes where you have reset the alpha of the top symbol, you can make one object fade and appear to become another.

This is a simple task. You want the screen to show a picture of Mona Lisa for 3 seconds.

Then you want the image of Mona to fade over 3 seconds and show the cartoonish Mona Lisa. That image needs to hold for 3 seconds. Then fade the bad image over three seconds to the good image.

The result is an image that changes in 3 second intervals repeatedly.

Good image 3 seconds
Fading image 3 seconds
Bad image: 3 seconds
Fading image 3 seconds
Good image 3 seconds.

Project name: mona-(yourname)

Hint: Line up the eyes.
